FOR IMMEDIATE RELEASE

L.A. CAD, INC. LAUNCHES KNOWLEDGE TRAX™ SKILLS-ASSESSMENT AND TRAINING-DEVELOPMENT SOLUTION AT AUTODESK UNIVERSITY 2006 IN LAS VEGAS

Improved Performance, Functionality and Content – Now Encompassing Full Spectrum of CAD-Related Autodesk® Software – Make Solution Even More Powerful at Helping Organizations Maximize Their Talent

Costa Mesa, Calif., Nov. 13, 2006 – L.A. CAD, Inc., Southern California's largest provider of computer-aided design (CAD) services and products, and the Western U.S.'s largest reseller of Autodesk® solutions, will launch its enhanced Knowledge Trax software skills-assessment and training-development solution – featuring improved performance, functionality and content – at Autodesk University 2006, Nov. 28-Dec. 1 at the Venetian Hotel in Las Vegas. Knowledge Trax now encompasses the full spectrum of CAD-related Autodesk software – including infrastructure, building design and manufacturing applications – enabling customers to better manage and maximize their employees' software skills across the enterprise.

Knowledge Trax is a personalized assessment solution with online knowledge-management tools that allows organizations to evaluate their employees' CAD-related software skills, identify and deliver appropriate training, and achieve better results from their training investments. L.A. CAD acquired Knowledge Trax from CorDax this past spring and is currently the solution's exclusive provider.

“Our goal in acquiring Knowledge Trax was to make it a highly valuable tool to help organizations determine their software skills – both at the individual employee level and for the organization as a whole – identify and correct knowledge gaps, and improve individual and organizational performance,” said Danny Counts, CEO of L.A. CAD, Inc. “In achieving our goal, the new Knowledge Trax is now the perfect

complement to L.A. CAD's strength as a leading provider of CAD-related software training services."

The new Knowledge Trax is easier to use than previous versions, including a more intuitive Web interface and better performance and functionality throughout. Perhaps the biggest enhancement is the breadth of software skills it can assess. Previously limited to Autodesk's core AutoCAD software offerings, Knowledge Trax now encompasses the full range of CAD-related Autodesk software, including Inventor, Civil 3D, Revit and others.

"The customer benefits from Knowledge Trax are many," said Jeff Rachel, L.A. CAD's strategic account manager for Infrastructure Solutions. "One of its greatest benefits is saving organizations time and money by pinpointing specific training needs – not just what classes a person or group requires, but what topics need to be covered in those classes. L.A. CAD can then quickly develop customized training modules to meet those needs and fill the knowledge gaps. Customers can even use Knowledge Trax to assess job candidates' skills during the hiring process."

More About the Knowledge Trax Solution

Many design- and engineering-driven organizations spend considerable time and resources determining their employees' CAD skills and training needs, and employees are often grouped together for training in skills that only some require, or require to differing degrees. Knowledge Trax eliminates these inefficiencies and redundancies by targeting individual employees' training needs and allowing organizations to spend their training dollars more wisely by targeting these areas of inefficiency. This offers the greatest return on investment and improved productivity for the entire organization. It also allows an organization to maximize their time to focus on their core business.

Knowledge Trax provides organizations and their managers with 24/7 online access to individual participant's assessment results and activity reports, which can be utilized to build a customized training curriculum to meet the organization's needs.

Individual Knowledge Trax training participants are posed a series of pre-skills inventory questions in a user-friendly, graphical online interface. Their answers, which are confirmed by second level of questions called the "answer-confidence meter," accurately determine their skill level in the "feature-set" areas within the technology they currently use – drawing and editing, for example. The results allow L.A. CAD, Inc. to offer companies a highly accurate assessment of their employees' knowledge gaps and recommend modular training solutions that dramatically reduce companies' overall training time and cost when compared to training everyone on everything, or not training anyone at all.

L.A. CAD, Inc. training solutions are available in several different forms, including "live" e-learning, modular group training, project or task training, open enrollment training, 4-hour workshops, seminar style training, and more.

L.A. CAD will be conducting Knowledge Trax demonstrations during Autodesk University at its exhibit (booth No. 537), located in the Sands Expo Exhibit Hall C. To schedule an individual demonstration or obtain more information, call (877) 87-LACAD (52223).

About L.A. CAD, Inc.

L.A. CAD, Inc. is the largest provider of computer-aided design (CAD) solutions in the Western United States, offering highly specialized consulting, training and support services for the civil design, mechanical design, architectural design, building engineering and GeoSpatial industries. The company's honest approach, unmatched technical expertise, including its high number of Autodesk Approved Instructors and Implementation Certification Experts, have made it the Autodesk provider of choice for a vast array of top and rapidly growing CAD and CAD-related companies. L.A.

CAD, Inc. has Autodesk Authorized Training Centers located throughout Los Angeles, Orange and San Diego counties. For more information, visit www.lacad.com.
