FOR IMMEDIATE RELEASE

**L.A. CAD, INC. ASSISTS IN DESIGNING AND DRAFTING
MAJOR CITY SUB-DIVISION PROJECT FOR
QUAD KNOPF ENGINEERING FIRM**

***Announcement Makes Company One of Few Resellers to Offer
Outsourced Design and Drafting Services***

Costa Mesa, Calif., May 22, 2006 — L.A. CAD, Inc., one of the nation's top resellers of CAD and CAD-related software, recently completed design and drafting work on a sub-division project for the Central California Engineering firm, Quad Knopf. The engineering design and drafting support were provided for street improvement plans and sanitary sewer and water plans that were part of a larger sub-division project in Wasco, Calif.

L.A. CAD's experience working with Autodesk® Land Desktop and Autodesk® Civil 3D were leveraged to complete a digital terrain model and finished ground profiles for the proposed streets. Additionally, labels and annotation were added to both plan and profile views to complete a final product.

"L.A. CAD has been involved in providing design-input services for quite some time. More recently, the volume of work that is coming our way has increased. We are excited to provide this level of service to our customers," says Danny Counts, CEO of L.A. CAD. "This type of service is quite out of the ordinary for many resellers. We have staff project managers and engineers that oversee the design-input work that is done by other L.A. CAD employees, simulating a real design environment that we can provide for our customers. Our customers benefit by outsourcing their design-input work to supplement their existing resources."

“We’re very appreciative of L.A. CAD’s assistance and we look forward to working with L.A. CAD on future projects,” said Dave Mellor, project manager, Quad Knopf.

With offices located in Central California, Quad Knopf offers multi-disciplinary services in engineering, architecture, biological sciences, land-use planning, policy planning and environmental assessment that enable it to take a comprehensive approach in resolving complex land development issues.

About L.A. CAD, Inc.

L.A. CAD, Inc. is the largest provider of computer-aided design (CAD) solutions in Southern California, offering highly specialized consulting, training and support services for the civil design, mechanical design, architectural design, building engineering and GeoSpatial industries. The company’s honest approach, unmatched technical expertise, including its high number of Autodesk® Approved Instructors and Implementation Certification Experts, have made it the Autodesk provider of choice for a vast array of top and rapidly growing CAD and CAD-related companies. L.A. CAD has Autodesk Authorized Training Centers located throughout Los Angeles, Orange and San Diego counties. For more information, visit www.lacad.com.
